- Solvent Proof
- Low Impedance
- Long Life
- Large Capacitance
- +105°C Maximum Temperature

The LXF series capacitors are designed to keep pace with the progressive miniaturization of electronic devices. LXF capacitors are ideal for use in compact DC-DC converters, switching power supplies and other high frequency applications. Important features include large capacitance, low impedance, a wide operating temperature range of -55°C to $+105^{\circ}\text{C}$, and long life.

The LXF series capacitors were developed to withstand HCFC cleaning agents for five minutes by ultrasonic, vapor or immersion. This solvent proof design allows all circuit board components to be cleaned together, at the same time, without resorting to more expensive epoxy end-sealed capacitors. Refer to the Mini-Glossary for recommended cleaning conditions.

Ripple Current Multipliers

When capacitors are operated at a temperature and frequency other than +105°C and 100kHz respectively, the ripple current should not exceed the value multiplied by the factor given in the following tables.

For applications requiring long life, do not apply ripple current higher than the rated ripple current specified at 105°C, even if actual operating temperature is less than the rated maximum operating temperature of 105°C. The temperature multipliers are based on the condition of the same life time as the rated maximum operating temperature.

When the temperature multipliers are used, longer life should not be expected even at lower ambient temperatures.
