RF POWER TRANSISTOR

2SC1964

GENERAL DISCRITION

MITSUBISHI 2SC1964 is a silicon NPN epitaxial planar type transistor specifically designed for power amplifiers operating in HF band.

FEATURES

1. High Gain: $G_{p0}=8.8\text{dB}(\text{min.})$ @27MHz, 12V, $P_{in}=0.4\text{W}$, $I_{c0}\leq 0.42\text{A}$.
2. The ability to withstand infinite VSWR at all phase angles when operated rated output power (100% AM) and $V_{cc}=16\text{V}$.
3. IMD: -30dB or better @ $P_o=5\text{W}$, $V_{cc}=12\text{V}$.

APPLICATION

Especially suitable for the output stage of 27MHz AM 5W transceiver sets.
