

### Z-TRAP ENE series

Nominal varistor voltage 200 to 470V

#### ■ Features

- Excellent clamping characteristics
- High discharge current capability
- Fast response time
- Eliminate follow-on current

#### ■ Maximum ratings and characteristics

##### ● Nominal varistor voltage 200 to 270V

Device type	Max. applied voltage *1		Nominal varistor peak voltage*2 (Tolerance)(V)	Clamping voltage*3		Peak current*4 (A)	Energy *5 (J)	Average power dissipation (W)	Typical capacitance f=1kHz (pF)	Standards *6

- Operating ambient temperature: - 40 to 85
- Storage temperature: - 40 to 125

Approved ○ Not approved —

\*1 The waveform of the maximum DC applied voltage is flat. When a ripple voltage as from a rectifier source is applied, make sure that the peak voltage is within the V<sub>dcm</sub> rating.  
The AC applied voltage is a sine waveform. When waveform distortion is extensive, make sure that the peak voltage is less than  $\sqrt{2}$  times the V<sub>acm</sub> rating.

\*2 Indicates the varistor terminal voltage measured with 1mA DC applied (V<sub>1mA</sub>). For 0.5A types, 0.1mA DC applied (V<sub>0.1mA</sub>)

\*3 Indicates the peak terminal voltage measured with 8/20 Impulse current (Ip) applied.

\*4 The peak current rating is based on 8/20 test impulse waveform. The peak current is the max. peak current at which the nominal varistor voltage shift does not exceed  $\pm 10\%$  when the test impulse is applied twice at a 5-minute interval.

\*5 The rating is the max. allowable energy of a single 2ms square-waveform impulse current continuously applied. Energy ratings are based on a shift of V<sub>nom</sub> of less than  $\pm 10\%$  of the initial value.
